

TATTOO AFTERCARE

keeping your
tattoo clean &
moisturized is
priority

WEEK #1

Days 1-2

Avoid sun exposure &
any swimming or baths
during the first 2 weeks.

Wash with antibacterial soap and apply a thin layer of unscented lotion to tattoo 3-4 times daily. It is normal for tattoo to ooze fluid - if it is of any concern don't hesitate to contact me.

* Leave bandage on until you get to a sanitary space to wash hands, wash tattoo with antibacterial soap and luke warm water, and then pat dry with paper towel.

Days 3-4

Still sore, but on the mend now. Tattoo may still be oozing some fluid or may be completely dry. Keep applying lotion & washing 3-4 times daily.

Days 5-7

This is the most common time for scabs or flakiness to form, which is a completely normal part of the tattoo healing process. Be aware of any clothing that can irritate the area. Keep applying lotion 3-4 times daily. **DO NOT PICK OR PULL OFF ANY SCABBING!!** - this can really influence the outcome of how the tattoo looks after healing.

WEEK #2

Your tattoo will likely be very itchy during this time, but keep up with your after care as usual. Apply lotion 3-4 times daily. **NO PICKING OR SCRATCHING.**

WEEK #3

Your tattoo should be almost done or completely done with scabbing. However, every tattoo can have a completely different healing process. It can take months for it to completely heal underneath the surface. Some itching will still be around but stick to only patting no scratching!!
